

Expanding the Global Health Impact of Biomedical Research and Technology

Tuesday, May 2, 4-5 pm
Price Center Santa Barbara/LA room

presented by Universities Allied for Essential Medicines

National website: <http://www.essentialmedicine.org/>

UCSD Chapter website: <http://mccammon.ucsd.edu/~dminh/UAEM/>

Many of the world's most essential medicines and public health devices are wholly or partly developed in academic laboratories.

Their accessibility to those living in poor nations is profoundly affected by the research, licensing and patenting decisions made by universities.

As members of these institutions of higher learning, we believe that universities have an opportunity and a responsibility to improve global access to public health goods – particularly those they have helped develop.

You are invited to come learn about and discuss global health issues. If you are a current or aspiring biomedical researcher, you can help ensure that the fruits of your labor have maximal global health benefits.

A thirty minute presentation will be followed by a time of open discussion.
